The Robert Owen Centre for Educational Change is delighted to invite you to a lunchtime seminar (12.00- 13.15) on 9th of June

“The incidence and returns to “Over-education”: PIACC evidence on the G7”

**Presented by Professor Geraint Johnes,
Professor of Economics, Lancaster University Management School**

PIAAC data are used to evaluate the extent of over-education in G7 countries. Incidence of over-education is seen to vary systematically with a number of demographic characteristics. The impact of over-education on remuneration is then estimated using quantile regression. This impact is observed to be minor, suggesting that while some individuals have qualifications in excess of those required to undertake their job, their additional human capital is nonetheless rewarded. Care therefore needs to be taken in interpreting measures of over-education.

Venue: Room 433A St Andrew’s Building
