

# Taipei Learning City

## Introduction

The land area of Taipei amounts to 272. square kilometers. The population amounts to 2,650,968 , the proportion of people above 65 years old amounts to 12.76% .

the learning city of sustaining development with six aspects, which are humanity, environment, riverbank, security, welfare, and health. Its to establish the first learning city in Taiwan

## The Goal of the Plan

- 1.In accordance to the trends of declining birthrate and aging population, it uses idle school facilities to establish entities of community colleges.
- 2.It establishes the community learning service centers in various community colleges in all districts to support the community learning networks.
- 3.It applies the modern technology to bridge the digital gap and promotes “the Taipei E-college” to facilitate the digital learning for the city residents.
- 4.It integrates the lifelong learning resources in the entire city to establish “the Taipei Learning City Net” to provide city residents resources and information of lifelong learning.
- 5.It combines all types of learning organizations including libraries and schools to establish a solid learning environment in which “Everyone learns everything everywhere at every moment”.

## Conclusion

In the global competition of the 21<sup>st</sup> century, every city strives to pursue urban progression and development. Hence, Taipei will go on strongly promoting all plans on the learning city so that Taipei will march towards the direction of “creative society, wise city and sustaining development”.
